5. using natural resources responsibility so that we have those resources for the future.
6. land on which animals graze.
8. domestic animals that are raised for food, milk, or fiber.
13. products used to control the damage caused by harmful diseases, insects, or weeds in a growing crop.

Across: 2. Erosion, 7. Nitrogen, 9. Biomass, 10. Water Quality,
11. Crop Rotation, 12. Cover Crop, 14. Insecticide
Down: 1. Fertilizer, 3. Buffer Strip, 4. Conservation, 5. Sustainability,
6. Pasture, 8. Livestock, 13. Pesticide

WATER

VOCABULARY

Biomass: organic matter that comes from living or recently living things and can be turned into renewable energy.

Buffer Strip: a grassed strip in areas of cropland that are subject to erosion.

Crop Rotation: growing a sequence of different crops on the same ground to maintain or increase its fertility.

Conservation: the protection of things found in nature.

Cover Crop: a crop planted to prevent soil erosion and to keep nutrients in the soil.

Erosion: the process in which the surface of the earth is worn away by the action of winds, waters, glaciers, and waves.

Fertilizer: a chemical or natural product used to nourish plants and help them grow.

Insecticide: products used to kill insects to protect plants from damage.

Livestock: domestic animals that are raised for food, milk, or fiber.

Nitrogen: a chemical element that makes up a large percent of the air in Earth's atmosphere and is part of all living things.

Pasture: land on which animals graze.

Pesticide: products used to control the damage caused by harmful diseases, insects, or weeds in a growing crop.

Sustainability: using natural resources responsibly so that we have those resources for the future.

Water Quality: the measurement of the healthiness and cleanliness of water.
